AP SERIES PNEUMATIC ACTUATORS

**brandoni**  
VALVES

## Technical Characteristics

AP series pneumatic actuators, with the integrated use of advanced precision machining equipment, high-quality materials and industrial art design technology. After rigorous testing and optimization of production line, AP series pneumatic actuators have lots of advantages like smooth and reliable operation, long working life, high corrosion resistance, flexible selection, competitive price and so on.

### Piston

The teeth of piston machined by CNC machining center, makes the operation smoother and performance more reliable. Anodized treatment improves the corrosion and wear resistance.

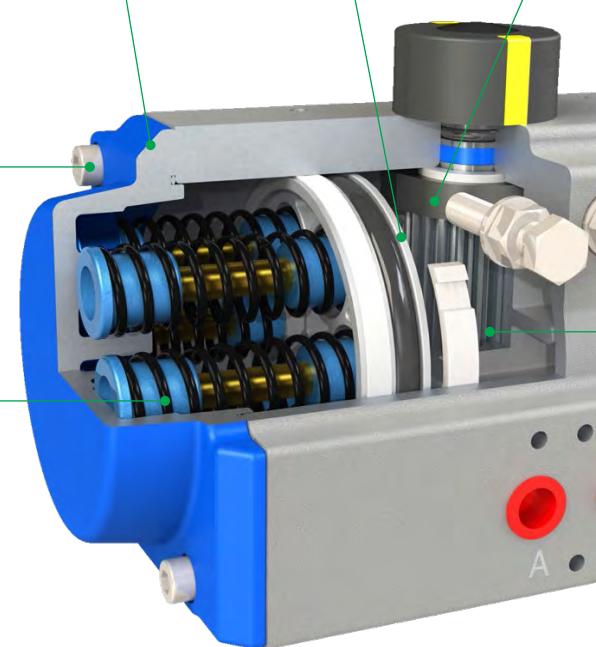

### End cap

The function of 95° position limit is optimally designed on the end cap, instead of extra limit screw. This design improves the safety and reliability.

### Fasteners

The stainless steel fasteners, are safe and beautiful with high corrosion resistance.

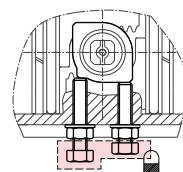

### Spring

Preloaded and coated springs are made from high quality material for higher corrosion resistance and longer service life, which can be demounted safely and conveniently to satisfy different requirements of torque by changing quantity of springs.

## Cam

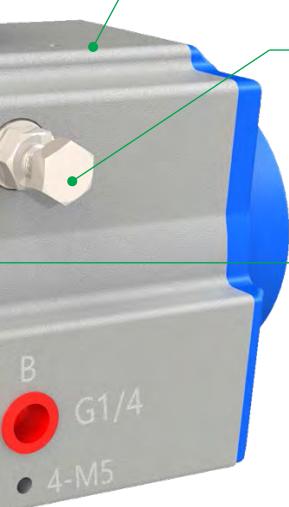

Cam with lock function\*, when the actuator is required to be locked in full open ( $90^\circ$ ) or fully closed ( $0^\circ$ ) position, the actuator can be equipped with special bolts and locking device, the actuator position can be locked, and prevent misuse.

\*AP40~AP125 / AP40~AP125 are available at this time

## Body

According to different requirements, the surface of aluminum body can be treated with hard anodizing, powder polyester coating in colors (like black, blue, orange, red etc.), PTFE coating or Nickel plated.

## Adjust screw

The two independent external travel stop adjust screws can adjust  $\pm 5^\circ$  at both open and close positions easily and precisely.

## Drive shaft

The drive shaft is high-precision and integrative, made from nickel plated alloy steel, full conform to the lastest standards of ISO5211, DIN3337, NAMUR. The dimensions can be customized and the stainless steel is available.

## Installation Specification

Limit Switch box

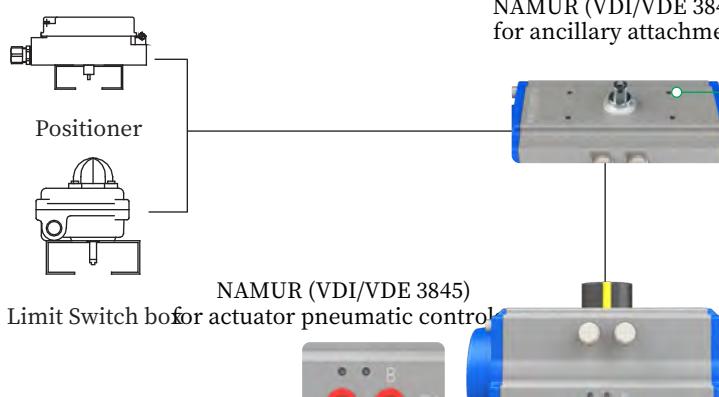

Positioner

Smart Positioner

NAMUR Solenoid valve

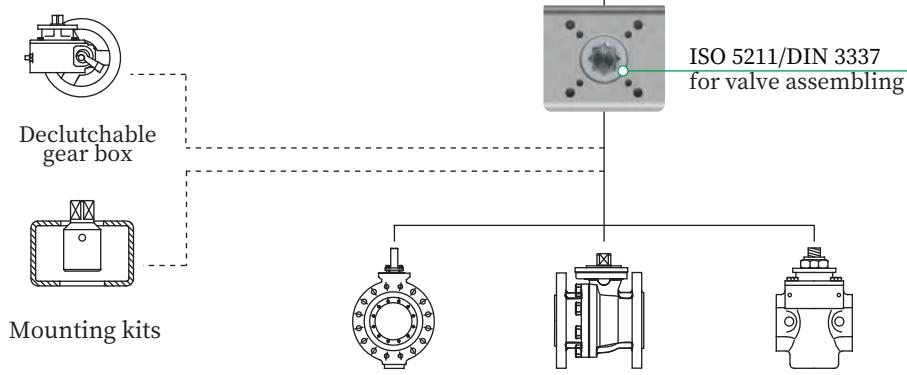

### NAMUR

The drive shaft top and top mounting connection conform to NAMUR (VDI/VDE 3845) standard, for direct installation of ancillary attachment like position or limit switch box.

### NAMUR

Air supply connection is designed in accordance with NAMUR Standard to install solenoid valves.

### ISO 5211/DIN 3337

The drive shaft bottom hole and bottom mounting connection conform to ISO 5211/DIN 337 standard, for direct installation on valves. Declutchable gear box or mounting kits as optional.

Butterfly valve

Ball valve

Plug valve

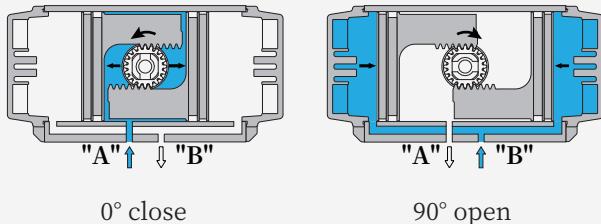

Declutchable gear box

## Operating Principle

### Double Acting Actuators

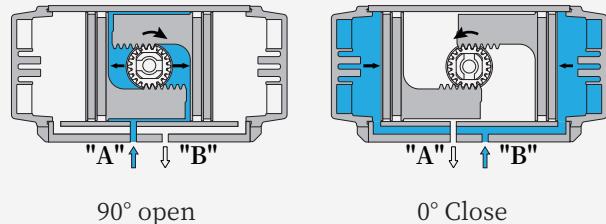

CCW (Standard)

0° close

90° open

CW

90° open

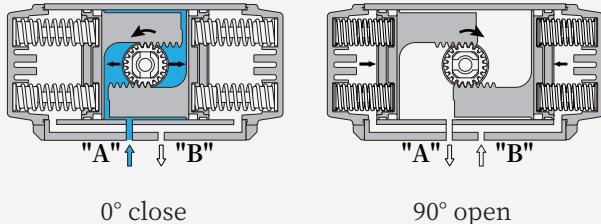

0° Close

Air to Port A forces the pistons outwards, causing the drive shaft to turn counterclockwise while the air is being exhausted from Port B. Air to Port B forces the pistons inwards, causing the drive shaft to turn clockwise while the air is being exhausted from Port A.

Air to Port A forces the pistons outwards, causing the drive shaft to turn clockwise while the air is being exhausted from Port B. Air to Port B forces the pistons inwards, causing the drive shaft to turn counterclockwise while the air is being exhausted from Port A.

### Spring Return Actuators

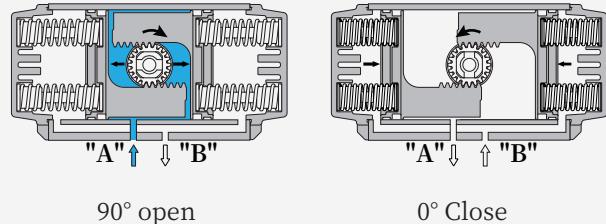

FC-CCW (Standard)

0° close

90° open

FO-CW

90° open

0° Close

Air to port A forces the pistons outwards, causing the springs to compress. The drive shaft turns counterclockwise while air is being exhausted from port B. Loss of air pressure on port A, the stored energy in the springs forces the pistons inwards. The drive shaft turns clockwise while air is being exhausted from port A.

Air to port A forces the pistons outwards, causing the springs to compress. The drive shaft turns clockwise while air is being exhausted from port B. Loss of air pressure on port A, the stored energy in the springs forces the pistons inwards. The drive shaft turns counterclockwise while air is being exhausted from port A.

## Operating Conditions

### Operating media

Dry or lubricated air, or the non-corrosive gases. The maximum particle diameter must less than 30 µm

### Air supply pressure

The minimum supply pressure is 2 Bar, the maximum supply pressure is 8 Bar

### Operating temperature

Standard (NBR O-rings): -20°C ~ +80°C

High temperature (Viton O-rings): -20°C ~ +150°C

Low temperature (LTNBR O-rings): -40°C ~ +120°C

### Travel adjustment

Have adjustment range of  $\pm 5^\circ$  for the rotation at 0° and 90°

### Lubrication

Actuators are factory lubrication located. Under normal operating condition, need not to add lubricant

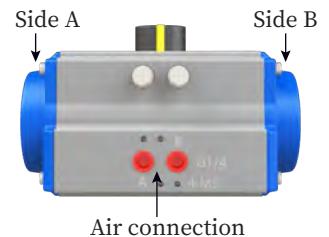

### Application

Either indoor or outdoor

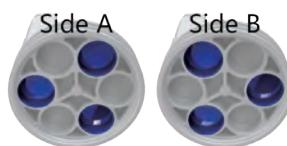

## Spring Set Configuration

### Spring mounting form for spring return actuators

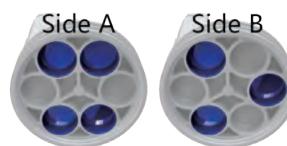

During selecting the spring return actuators, we can choose the more reasonable and more economical actuators, if we know the different torques of the valve at opening, operating and closing.

### Sizing: Double Acting Actuator

The suggested safety factor for double acting actuators under normal working conditions is 20%-30%

Example:

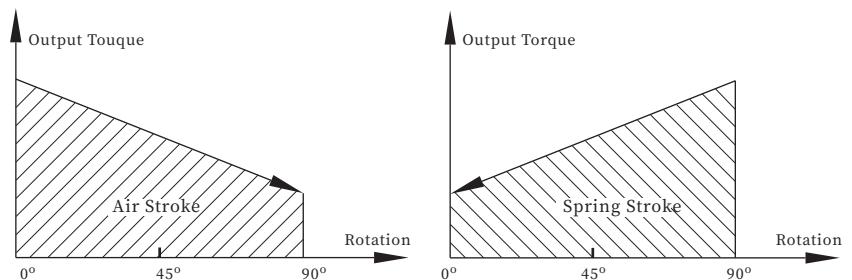

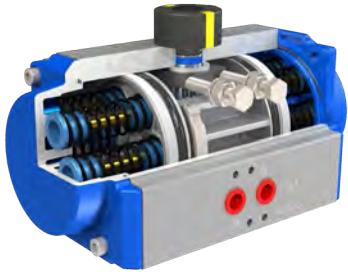

The torque needed by valve=100N.m

The torque considered safety factor (1+30%)=130N.m

Air Supply=5Bar

According to the above table, we can select the model AP 105-DA.

For Spring Return Actuator

## \* Standard Sizing: Spring Return

The suggested safety factor for spring return actuator under normal working conditions is 30-50%

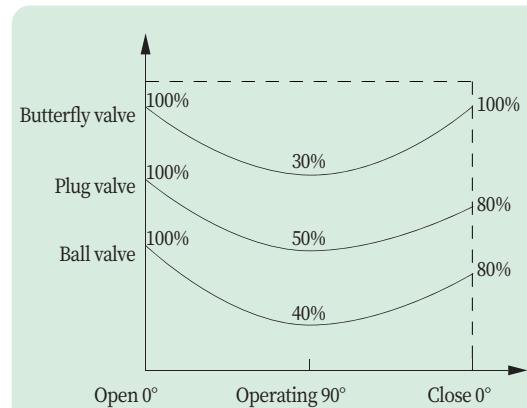

### Example:

The torque needed by valve=80Nm

The torque considered safety factor = $80 \times (1+30\%)=104\text{Nm}$

Air Supply=5Bar

According to the above table, we can select the model AP-140SR7.

## \* Economical Sizing: Spring Return

We can choose the more reasonable and more economical actuators, if we know the different torque of the valve by opening, operating and closing.

### Example:

The max torque needed by the butterfly valve=104Nm

The torque after opened (operating) $104 \times 30\% = 32\text{Nm}$

Air Supply=5Bar

We can select the model AP125SR10, output torque is:

Air stroke 0°=146Nm >104Nm

Air stroke 90°=94Nm >32Nm

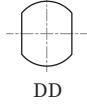

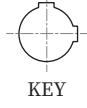

Spring stroke 90°=157Nm >32Nm

Spring stroke 0°=105Nm >104Nm

The above datas show the actuator's torque can satisfy the requirement of the butterfly valve.

## How To Order

Example: AP-75SR10 FC-CCW HT

**13, 120°, 135°, 180°**

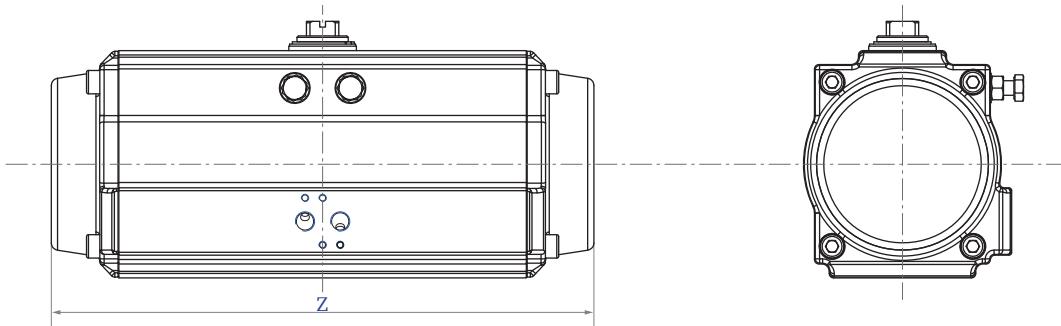

## **120°, 135°, 180° Pneumatic Actuator (Double Acting only)**

In order to meet the special requirements of control valve, we produce special strokes actuators on customer request (e.g. 120°, 135°, 180°etc.).

### Output Torque

Output torque of special strokes actuators, please refer to the torque of 90° actuators (P11).

### Length of 180° pneumatic actuator

Unit:mm

Please contact us for more information.

## **Three Position Pneumatic Actuator**

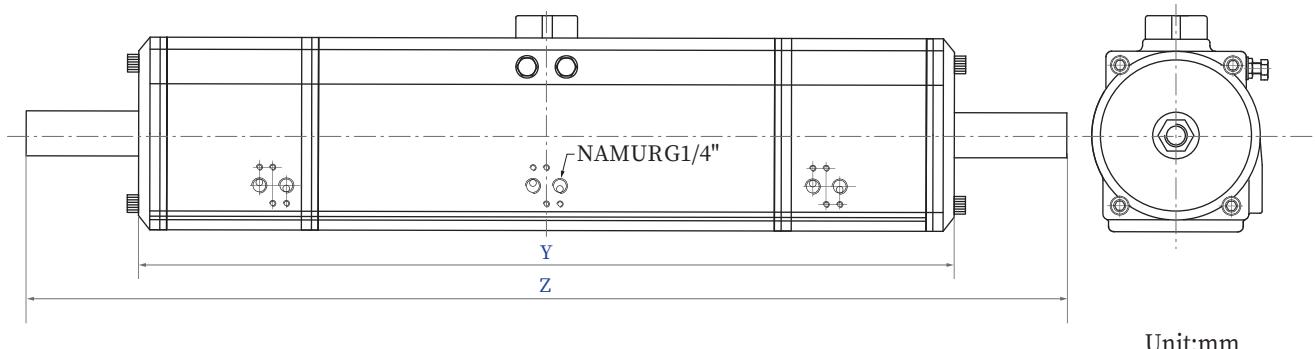

Three position actuator provide an operation of 0°, 45°, 90°or 0°, 90°, 180°. The midway position is achieved by a mechanical stop of movement on the 2 auxiliary pistons. This midway stop position is adjustable, for example, 90° three position actuator can provide midway position of 20°, 30°, 40°, 50°, 70° or else.

## Output Torque

Output torque of three position actuators, please refer to the torque of 90°actuators (P11~P14).
