(11) Description of Equipment;

Ball Valves are industrial mechanic equipments. Ball Valves is used to open or cut off the flow adjustment of liquid flow. Ball valves are working with a system except for manpower. These system actuators, pneumatic, hydraulic, etc. are systematically driven. Piston valves can be used to control the flow of almost all kinds of fluids. Valve body material may be cast iron, ductile iron, cast steel and stainless steel with appropriate sealing rings. Piston Valves have two important components: fine ground cylindrical piston made of stainless steel and elastic valve rings.
